

AVSR Upper Cylinder Lubricant

AVSR (Anti valve Seat Recession) Lead replacement for Unleaded Fuel with Injector Cleaner

Product code s8508, June 10, 2004

Description

Synforce AVSR Upper Cylinder Lubricant is a high quality Multi-Fuel "Upper Cylinder Lubricant" for use with Unleaded petrol, LPG etc. Upper Cylinder Lubricant will provide extra benefits to your vehicle when used correctly with any of these fuels as it is manufactured with a fuel system cleaner so, not only does it lubricate and protect, it will maintain a clean system to help further improve fuel economy.

AVSR Upper Cylinder Lubricant eliminates Valve Seat Recession caused by burning unleaded fuel in engines designed for leaded fuels.

Directions for Use

AVSR Upper Cylinder Lubricant can be used in conjunction with any correctly fitted Lubricator Kit. Just pour into Lubricator Kit Bottle and let the kit automatically meter the correct amount of lubricant to the engine.

AVSR Upper Cylinder Lubricant is added manually to all other vehicles not fitted with Lubricator kits.

When adding UCL to the fuel tank, always **ADD AVSR UCL PRIOR TO FILLING TANK**, ensuring that it mixes properly with the fuel by the turbulent action when the fuel is being pumped into the tank.

Synforce AVSR Upper Cylinder Lubricant should be mixed at the rate of 100ml of UCL to 65 litres of fuel (average tank size).

Main Benefits when used

- ❖ Cleans and lubricates hot, dry valve facings, eliminates valve seat recession
- ❖ Reduces valve sticking
- ❖ Reduces valve burning by ensuring cleaner & better valve seating.
- ❖ Controls and cleans upper cylinder deposits (carbon) and prevents new deposits forming. Cleans and controls piston & piston ring deposits
- ❖ Improves Fuel economy and reduces emissions
- ❖ Encourages smoother running & improved performance
