

## ***SloGEAR Series Gear Oils***

Product code s4650, July 10, 2010

### **Description;**

Synforce SloGEAR Industrial Gear oils are formulated to meet the service requirements in heavily loaded industrial gearboxes, plain bearing and open gear lubrication.

SloGEAR oils are blended using 100% group 2 base stocks and contain a Tackifying additive and are highly recommended in applications where the lubricant is required to resist fling off and dripping off the equipment.

Using the latest sulphur/phosphorus EP additive package in "overtreat" proportions, SloGEAR series maintain lubricant film strength and load carrying capacity. They offer excellent corrosion protection and resistance to high temperature sludging.

Compatibility with copper and its alloys make SloGEAR series oils suitable for gearboxes and drives using bronze components.

### **Meets or Eceeds;**

US Steel 224

AGMA 250.04

Cincinnati Milacron

API GL-3,4

S-200 Oxidation Tubes

### **Typical properties;**

		<b>150</b>	<b>220</b>	<b>320</b>	<b>460</b>
Viscosity	cst @ 40 deg C.	150	220	320	460
	cst @ 100 deg C.	15.6	20.4	25.6	32.8
Density		0.880	0.883	0.902	0.906
